NBS4MED

NBS4MED self-evaluation: summary report

Area	Assessment scale	Date
İzmir Green Roof Pilot, Türkiye	**Site / Project Area**	**2026-10-17**

Site context. Selected risks: Heatwaves; Flooding; Drought. Urban density: High. Public land available: Limited.

Criterion profile

Fixed 0 to 100% axis. Provisional levels. Unknown is never shown as zero.

Current NBS integration (C1)

C1 NBS Integration Status — **50%** · Partial, 3 / 6 points

Enabling and implementation conditions (C2 to C5)

C2 Policy & Planning — **50%** · Partial, 3 / 6 points

C3 Institutional & Technical Capacity — **67%** · Adequate, 4 / 6 points

C4 Stakeholder Engagement — **25%** · Insufficient, 1 / 4 points

C5 Funding & Sustainability — **50%** · Partial, 3 / 6 points

Provisional combined assessment score (secondary; not a validated measure of NBS integration): 14 / 28 · 50% · Partial.

Completeness (14 indicators): 14 scored · 0 Unknown · 0 unanswered · 0 Not applicable

Confidence in the 14 scored answers (self-reported): documented evidence 1 · staff estimate 0 · informal judgement 0 · not stated 13. A complete answer is not necessarily documented evidence.

Major gaps and improvement actions

Provisional display order (score 0, then 1, then Unknown). Not a validated ranking.

1. **1.3 — Link to grey infrastructure** (Gap, Score 0): Introduce a step in infrastructure projects to consider NBS at the design stage.
2. **2.3 — Targets and monitoring** (Gap, Score 0): Define a small set of measurable NBS targets, for example area, number or condition of solutions, with a baseline year.
3. **4.1 — Community participation** (Gap, Score 0): Introduce a participation step, such as workshops, in the early stage of NBS planning.

7 more findings are in the detailed report.

Key limitations. Matching covers heatwaves, flooding and drought only, with unvalidated weights. Costs are illustrative. Climate-risk mitigation impact is not currently estimated.

Preliminary NBS options

Provisional rule-based match to the selected risks. Not a validated ranking, feasibility check or predicted impact.

Relevant to the selected risks

Green roof Applicability: **Not yet checked**	Heatwaves; Flooding; Drought
Green corridor Applicability: **Not yet checked**	Heatwaves; Flooding
Permeable paving Applicability: **Not yet checked**	Flooding; Drought

Green roof (Green infrastructure, provisional): Heatwaves (moderately); Flooding (moderately); Drought (weakly). Uses existing roof space, not public land. Roof availability and structure still need checking.

Green corridor (Green infrastructure, provisional): Heatwaves (strongly); Flooding (weakly). Not a target of this option: Drought. Land need fits the available public land.

Permeable paving (Blue-green water management · Hybrid/integrated solutions, provisional): Flooding (strongly); Drought (weakly). Not a target of this option: Heatwaves. Land need fits the available public land.

Shared implementation conditions

- **5.2 Long-term maintenance budget**: Score 0: No budget covers maintenance, watering or replacement of NBS.

Supporting calculations and indicative cost

Cost and impact exploration not completed.
